

Multi Tenant Architecture

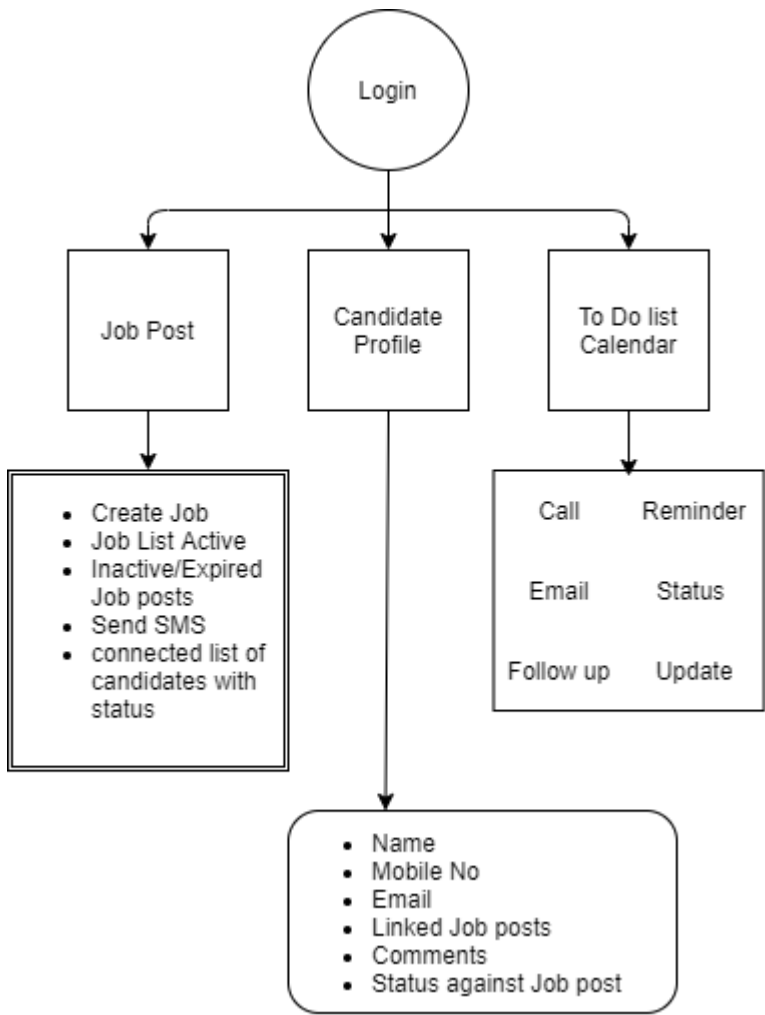

Preferred Technology platform - Codeigniter or Laravel with MySQL.

The App will be browser based

The app is aimed to help HR team with the following

- Manage Resumes
- Send mass SMS to Candidates about relevant openings
- Create Job Postings
- Generate Short url for Job Postings
- Get SMS response on mobile
- Update candidate status with ...
 - Interested or not interested
 - Shortlisted - not Shortlisted
 - Preferred call time
- Set reminder to call candidate on preferred time slot and date
- Update Candidate's page with comments, statuses,
- Candidate's page with attached resumes in descending order from Latest on top, related/applied/interested job posts

App Flow

Pages

1. Login
2. Dashboard
3. Job Post - List
4. Job Post - Detail
5. Candidate Details
6. Candidate - List view
7. Calendar - To Do
8. To Do list view - with filter

Multi Tenant

We need this app in Multi Tenant format where we can offer it as SaaS or PaaS

Following are a few core features required in Multi-tenant.

Each new Tenant will have a separate source and database (entire new instance)

Users visit the customer portal and ...

- Register for free trial
- Select plan, pay and start subscription
- View their invoice and subscription status anytime
- Create users and assign Create, Edit, Delete right for any/all module
- User can add multiple admins

The Super Admin can do the following

- Create and update plans for monthly and/or yearly payments
- Update free trial limit for all new users or any selective single user (Tenants)
- View list and details of Free Trial users and subscribed (paid) users (Tenants)
- Create users (Tenant) manually

Senior software engineers soroco india

 Client Soroco India	 Position Senior Software Engineer	 Location Bangalore	 Job Time Full Time
--	--	---	---

The company

We are a young, fast-growing AI company shaking up how work gets done across the enterprise. Every day, we help clients identify opportunities for automation, and then use a variety of AI and advanced automation techniques to rapidly model manual work in the form of code.

The Role

The Senior Software Engineer(SSE) will drive the company's technical growth and delivery by working with engineering teams and client teams. A SSE will typically work in, andmentor,product development or client solution teams to create and deliver complex proprietary systems.

The Candidate

The ideal SSE is passionate about working with and guiding high-tech software development teams working on hard problems in computer science in areas such as distributed systems, machine learning, NLP, computer vision, programming languages, computer security, networking, cloud computing, analytics and big data.
